

SIEBTECHNIK TEMA

Leading Process Solutions

Leading Process Solutions

At SIEBTECHNIK TEMA, we deliver Leading Process Solutions for solid-liquid separation and bulk material processing - tailored precisely to your needs.

As part of a globally active, family-owned group of companies with over 100 years of experience, we support our customers as OEM and system supplier for centrifuges, decanters, dryers, screening machines and jigs, as well as sampling systems and laboratory equipment. Our portfolio also includes selected technologies and specialized equipment from our corporate network – designed for reliable operation, efficiency and durability.

Our commitment towards Leading Process Solutions means we deliver proven machinery for standard applications, but our core focus is on custom solutions tailored to your specific needs. Whether in the chemical, food, or mineral processing industries, we aim to support you in optimizing processes and improving operational efficiency.

With our Technology Center and main production site in Germany and various manufacturing and service hubs worldwide and more than 50 local sales offices, we combine global presence with local expertise – ensuring access to our Leading Process Solutions, wherever you operate.

SIEBTECHNIK TEMA stands for engineering know-how and partnership. As part of a financially robust group focused on sustainable, steady growth, we are committed to supporting our customers - today and in the future.

Through experience, technical understanding, and close cooperation, we help turn process challenges into solutions - every day, all over the world.

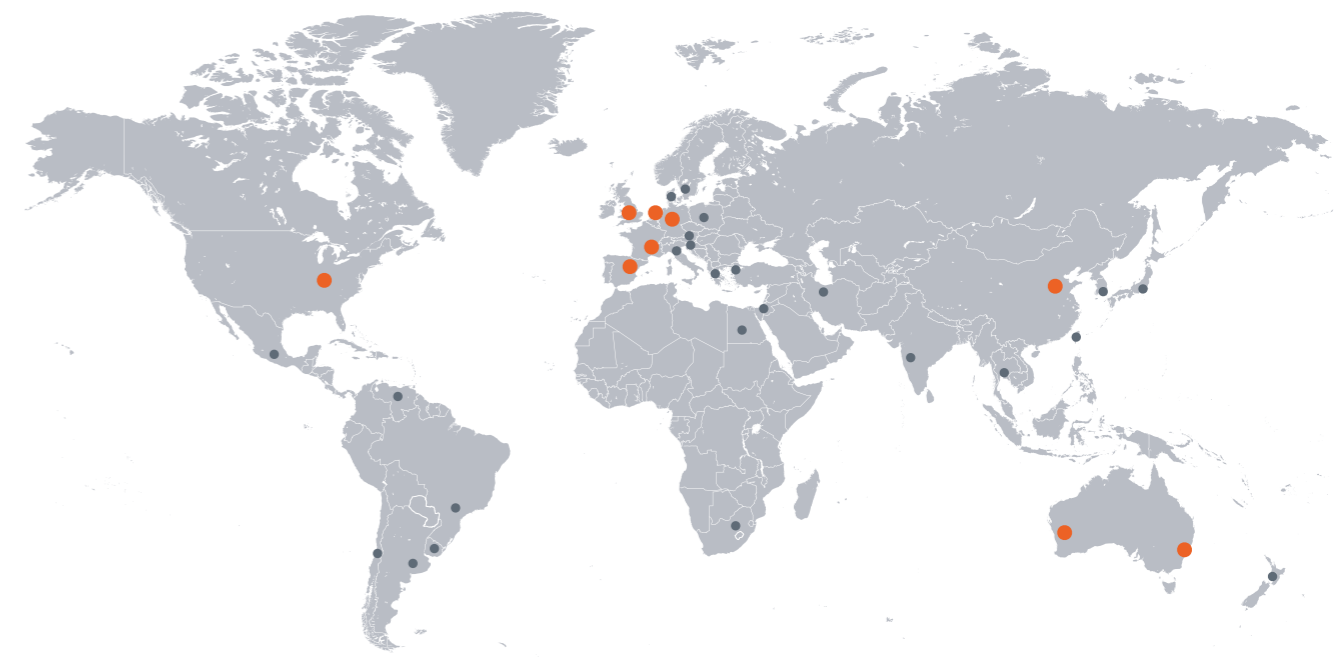

Group of Companies

Integration and Synergy within the STAFAG Group

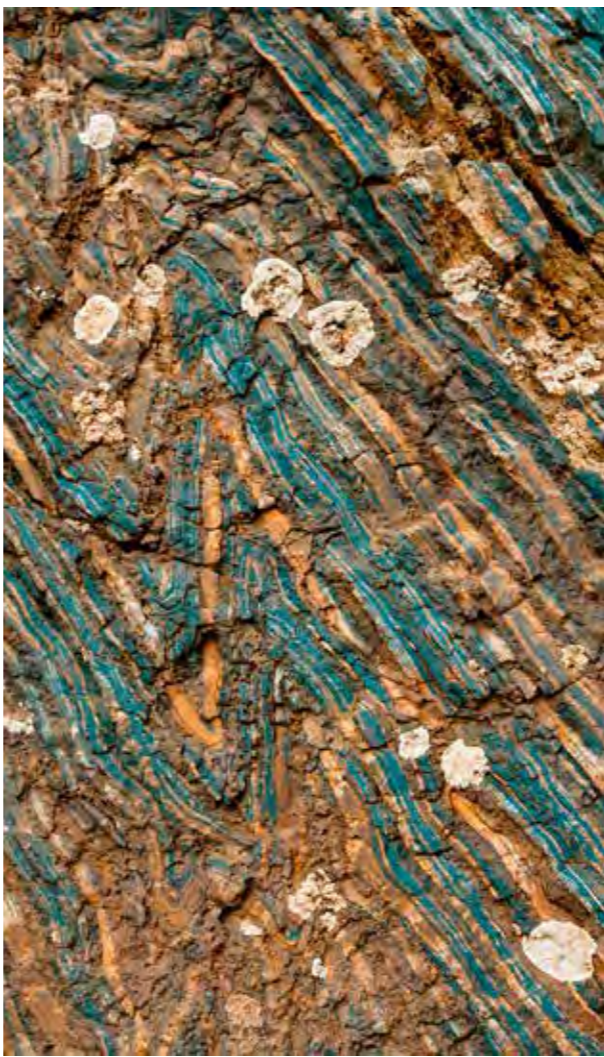

SIEBTECHNIK TEMA as part of the STAFAG Group, is a family-owned international network of process technology companies. This strategic alliance combines strong brands such as SIEBTECHNIK TEMA, ALLGAIER Process Technology and Multotec.

Within our group, SIEBTECHNIK GmbH Germany serves as the technological and manufacturing center for centrifuge and separation technology, creating new synergies with our other manufacturing sites in China, USA, Australia and South Africa.

In every Industry.

Worldwide.

SIEBTECHNIK TEMA supplies machines, system solutions and components for almost every branch of industry worldwide.

From battery materials and mining to chemicals, recycling, and food production, our equipment supports key stages of the value chain.

With decades of experience, we provide functional, durable solutions tailored to your processes.

Engineering Expertise Proven in Practice

Our expertise covers the full range of process steps required for efficient solid-liquid separation and bulk material processing.

From sampling, analyzing, crushing, screening, sorting, filtering, drying and cooling, to centrifugal processing and complete system solutions, we support our customers across every key process step within their operation. Each solution is based on a deep understanding of material behavior and real operating conditions.

With more than 100 years of experience in process technology, over 10,000 satisfied customers worldwide, and insights gained from more than 50,000 test series, SIEBTECHNIK TEMA combines proven engineering with application-driven development.

This foundation enables us to deliver reliable, scalable solutions — from individual unit operations to fully integrated process systems.

SIEBTECHNIK TEMA centrifuges support solid-liquid separation across a wide range of applications.

Our broad portfolio of proven machine types includes screen worm centrifuges, pusher centrifuges, sliding centrifuges, vibrating centrifuges, decanter centrifuges, SHORTBOWL decanter, screenbowl decanter, TURBOSCREEN decanter, CONTHICK screen decanter, peeler centrifuges and laboratory centrifuges. Modular configurations and application-specific options ensure reliable operation, long service life and dependable results in industrial processes worldwide.

We offer machines for all areas of everyday laboratory life, from analytical screening to crushing.

On request also complete systems for laboratory automation.

Our laboratory equipment with innovative app control enables modern and efficient work.

We design and manufacture sample taking and sample preparation systems tailored to your application.

Our solutions support reliable, reproducible analyses by ensuring representative samples. Because every meaningful analysis starts with correct sampling.

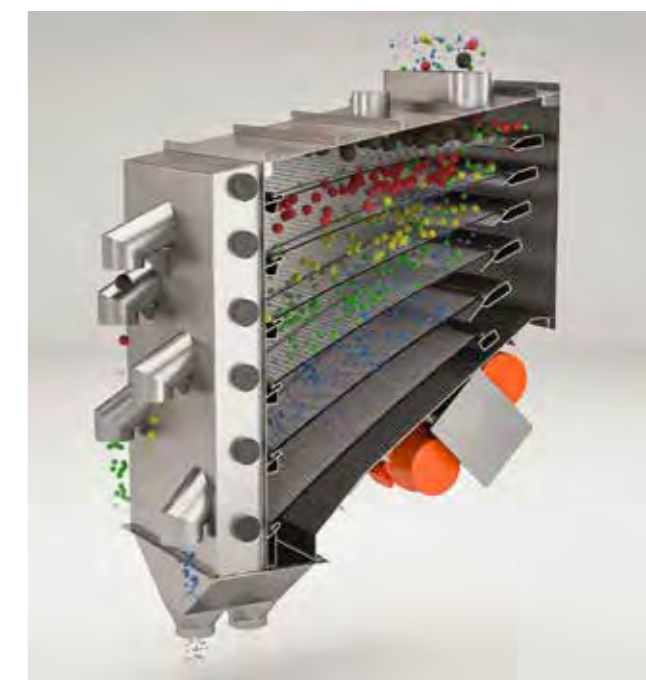

Our screening machines and jigs cover a wide range of separation, classification, and sorting tasks for bulk solids and slurries.

Screening machines enable precise separation, classification, and dewatering, delivering reliable results even under demanding process conditions.

Jigs provide efficient density-based separation of minerals and bulk materials with different specific weights, combining high throughput with low energy consumption.

For flexible applications, semi-mobile pulsator jigs offer a compact solution that can be deployed quickly and adapted to changing process requirements.

At SIEBTECHNIK TEMA, service is more than support. It is a long-term partnership designed to keep your production reliable, efficient and available throughout the entire life cycle of your machines and systems.

From initial consulting and testing to commissioning, optimisation and long-term operation, our service begins with a clear understanding of your process requirements. Where needed, we support you with laboratory and pilot trials to define the right solution from the start.

As an OEM partner, we work with you to develop maintenance concepts tailored to your operation. This includes preventive maintenance, spare parts supply and performance optimisation, all aimed at maximising system availability and avoiding unplanned downtime.

Our specialists also support you with troubleshooting, repairs, modernisation and retrofit solutions, ensuring your equipment remains reliable and up to date over decades of operation.

Wherever your systems are in use, our experienced teams provide coordinated, responsive support through a global service network trusted by customers worldwide for over a century.

Our machines and system solutions support a wide range of applications, including zero liquid discharge concepts, recycling processes, and demanding operations in the food, chemical, and mineral sectors. In these contexts, we help reduce waste streams, recover valuable materials, and enable stable, controlled processes.

Our ESG commitment is based on three pillars. Environmentally, we emphasize responsible resource use and long-term efficiency in our technologies. Socially, we promote health and safety, diversity, equal opportunities, and fair working conditions. In governance, we stand for compliance, risk awareness, and fair, ethical business practices.

This holistic approach reflects our long-term mindset and our commitment to responsible engineering.

SIEBTECHNIK TEMA operates within a global network of specialized companies active in bulk material processing and solid-liquid separation. The group includes ALLGAIER Process Technology for tumbler screens, dryers & coolers, HEIN | LEHMANN for screening, separation and conveying solutions, ISENMANN for industrial screen media, MULTOTEC with a focus on mining and mineral processing, STEINHAUS for screening media, belts and filters, and UNISLOT® for filter tubes used in filtration applications.

The close cooperation within the group reduces technical interfaces, simplifies coordination and enables integrated solutions for your benefit.

At SIEBTECHNIK TEMA, our strength lies in our people. We unite diverse experts from across the globe, blending deep technical knowledge with local market insights. By fostering a culture of cross-border collaboration and knowledge sharing, our international teams turn complex challenges into seamless, integrated solutions.

SIEBTECHNIK TEMA

Leading Process Solutions

SIEBTECHNIK TEMA offers an extensive product portfolio for a wide range of industries around the world.

As a renowned OEM & system supplier, our group of companies specializes in mechanical engineering, as well as process engineering, components and services. Customized solutions - tailored exactly to customer needs - have been the key to our success for over 100 years.

We are experts in the field of solid-liquid separation and processing of mineral bulk materials – with more than 50 local sales offices and representatives worldwide.

Our product portfolio includes:

Automation | Centrifuges | Control Screening Machines | Conveyors | Crushers
Decanters | Dryers | Gas Pycnometers | Laboratory Equipment | Peeler Centrifuges
Pneumatic Tube Systems | Pulsator Jigs | Pusher Centrifuges | Sample Preparation
Screen Decanters | Screening Machines | Sliding Centrifuges | Vibratory Centrifuges
Worm Screen Centrifuges
